## Sword Services

Recruiting Team — Human Resources

Nyon, VD, Switzerland

### Subject: Application for the Data Analyst / Data Specialist position (Nyon)

Dear Hiring Team,

I am writing to apply for the Data Analyst / Data Specialist position in Nyon. As a Computer Engineer specialized in Data Science, with hands-on experience structuring and analyzing real-world datasets and a solid command of Python, SQL, and Excel, I am motivated to contribute to your medical research program at the intersection of data, science, and health.

During my internship at CTT, I built an end-to-end pipeline to analyze and classify thousands of customer reviews. I handled the full data lifecycle — preprocessing, cleaning, and quality checks, then structuring and modeling — and automated the export of the results into clear Excel reports that non-technical stakeholders could act on directly. That experience taught me how to turn messy, real-world data into validated, documented, and decision-ready outputs, which is precisely the structuring, quality, and result-popularization work this role calls for.

I approach data with a rigorous, quality-first mindset. In my engineering projects I evaluated systems against formal benchmarks — using ranking metrics such as nDCG and MRR — and built validation layers that verify every result before it is trusted; these habits translate directly into assessing data quality and relevance, identifying methodological limitations, and proposing improvements. I am comfortable with Python (Pandas, NumPy, scikit-learn, Matplotlib) and SQL, and I have designed platforms for storing, organizing, and serving structured and vector data, so I am at ease contributing to the tools that support data management.

I work fluently in English (TOEIC 825/990) and French (DELFB2), which lets me collaborate comfortably in a French-speaking, multidisciplinary environment. I am organized and used to tracking several projects in parallel with a rigorous approach, and I am genuinely eager to grow into an autonomous reference on data questions within your team. The opportunity to apply advanced data exploitation to high-level medical research is exactly the kind of meaningful, evolving challenge I am looking for.

I would welcome the opportunity to discuss how my analytical background and attention to data quality could support Sword Services' research goals. Thank you for your time and consideration.

Sincerely,

Khaled Lakhdher
